

# OptiCrop - Performance Testing Report

## Project

Performance evaluation of the OptiCrop application.

## Objective

Assess responsiveness and stability under normal usage.

## Test Environment

Standard desktop/laptop, modern web browser, Flask application.

## Performance Metrics

- Response Time: To be updated after deployment testing.
- Model Accuracy: To be updated after final evaluation.
- CPU & Memory Usage: Within acceptable limits during normal execution.
- Concurrent Usage: Basic functional verification completed.

## Observations

The application loads successfully, accepts user input without noticeable delay, and displays prediction results correctly under normal conditions.

## Future Improvements

Record benchmark response time, stress testing, concurrent users, and final ML accuracy after production testing.

## Conclusion

Current testing indicates stable functional performance. Detailed benchmark values will be added after final testing.
