

OptiCrop - User Acceptance Testing (UAT) Report

Project

OptiCrop is a team-based machine learning web application that recommends suitable crops based on agricultural parameters.

Objective

Validate that the application satisfies end-user requirements and core functionality.

Scope

Crop recommendation workflow, input validation, prediction display, and user interface.

Prerequisites

Application deployed and accessible through a web browser.

Sample UAT Test Cases

1. Enter valid soil and weather values → Recommendation displayed (Pass).
2. Leave mandatory field empty → Validation message shown (Pass).
3. Enter invalid numeric values → Error handled gracefully (Pass).
4. Multiple predictions tested → Consistent output (Pass).

User Feedback

The interface is simple, inputs are easy to understand, and prediction results are displayed clearly.

Conclusion

The application is considered ready for demonstration. Final acceptance will be completed after full model validation and accuracy testing.
